Let's talk about trust. Which of the following statements is FALSE?

Wählen Sie eine Antwort:

- ☐ Without being vulnerable or at risk, the concept of trust is rather irrelevant.
- ☐ If an AI system appears competent and reliable, important requirements for the establishment of cognitive trust are met.
- ☒ At the market launch of an AI system, when there is still little practical experience with it, no individual differences in how much users trust the system are expected.
- ☐ Once affective trust is established, a trustor-trustee relationship may become less transparent for objective risk assessments.

Can Virtual Reality help patients with phantom limb pain?

Wählen Sie eine Antwort:

- ☐ Yes, patients feel less pain when they can focus on any video game in VR.
- ☐ No, it has been shown that patients with phantom limb pain feel even more stressed when using Virtual Reality.
- ☒ Yes, it works similar to the well-established Mirror Therapy.
- ☐ No, it has been shown that Virtual Reality functions still need to be improved to help such patients.

In his guest lecture, Horst Pichler spoke about credible robot systems. What does he consider necessary for their realization?

Wählen Sie eine Antwort:

- ☐ The use of psychological questionnaires to obtain a massive data set on credibility perceptions by robot users, from which can then be learned.
- ☐ Intensive cooperation with product designers to make industrial robots more aesthetically pleasing and thus more credible.
- ☒ The establishment of clear technical guidelines that, when followed, give a robot system "certified" trustworthiness.
- ☐ Less interdisciplinary research cooperations, as the focus on technical progress is in danger of being lost.

The Technology Acceptance Model (TAM, Davis, 1989) is one of the most widely used research models to predict technology adoption by new users. Which statement about the TAM is CORRECT?

Wählen Sie eine Antwort:

- ☐ The TAM has a strong focus on cultural differences, e.g. between Western and Eastern countries.
- ☐ The TAM has a strong focus on healthcare applications, e.g. nursing robots.
- ☐ The TAM has a strong focus on hedonic qualities of a technology, e.g. stimulation or enjoyment.
- ☒ The TAM has a strong focus on pragmatic qualities of a technology, e.g. ease of use or perceived usefulness.

After being confronted with pictures of white things, many people respond "Milk!" to the question "What does a cow drink?". How do you explain that?

Wählen Sie eine Antwort:

- ☐ A dominant "key stimulus" influences the perception of a subsequent stimulus. This is called keying!
- ☐ This is a good example of how operant conditioning works. Like Pavlov and his dog!
- ☐ This represents a conscious recourse to an experience we made in the past. It is our explicit memory!
- ☒ A preceding stimulus "prepares" our processing of a subsequent stimulus. This is called priming!

In an empirical study on general effects of different robot colors on their users, female participants were shown a green robot, whereas male participants saw the same robot in blue. Did the study follow the rules of a scientific experiment?

Wählen Sie eine Antwort:

- ☒ No, because there was no random assignment to the conditions.
- ☐ Yes, because the study involved both genders.
- ☐ Yes, because the study included two factor levels.
- ☐ No, because it is unethical that only male participants were shown the blue robot.
