IML	Ai in Life Sciences	CB	Optimizers for Autoregressive Models in Molecule and Protein Generation	1	1	https://kellerjordan.github.io/posts/muon/ https://arxiv.org/pdf/2502.16982	Exploring pretraining dynamics with novel optimizers in Life Science Domain, including data scales, tokenization schemes and out of distribution generalisation	
IML	RL/Image Gen.	CB	Latent Chain-of-Thought Image Generation	1	1	https://arxiv.org/pdf/2203.01941	RVQ Model trained on MNIST,... SFT Trace construction, RL Tuning	
IML	Ai in Life Sciences	CB	Latent Chain-of-Thought from Diffusion Models	0	1	https://arxiv.org/pdf/2505.00503 https://arxiv.org/pdf/2505.23660		
IML	Deep Learning	PM	Sharpness-Aware Minimization	1	0	https://arxiv.org/abs/2010.01412 https://arxiv.org/abs/2410.10373	Finding flat minima by minimizing the worst-case loss within a small neighborhood of the weights, i.e., updating parameters to perform well not just at a point (robust flatter solutions); often most noticeably late in training.	Supervision: Bi-weekly meetings.
IML	Deep Learning	WB	Comparing Linear Attention Variants	1	1	https://arxiv.org/abs/2602.04852 https://arxiv.org/abs/2405.04517 https://arxiv.org/abs/2412.06464 https://arxiv.org/abs/2312.06635	Compare linear-attention variants on synthetic sequence tasks using the Flash Linear Attention library, and analyze their learned internal representations to understand what and how the different architectures store.	Supervision: Bi-weekly meetings.
IML	Reinforcement Learning	EB	Comparing PPO and PQN	1	0	https://arxiv.org/abs/2407.04811 https://arxiv.org/abs/1707.06347 https://www.nature.com/articles/nature14236	The main deep reinforcement learning algorithm used today is PPO and its variants (e.g. GRPO). DQN has faced multiple challenges in the past. A newer version (PQN) tries to mitegate most of them. The aim of this topic is to compare PPO and PQN on a set of environments and to find each approaches strengths and weaknesses.	
IML	Reinforcement Learning	ML	Temporal Credit Assignment in Reinforcement Learning	1	1	https://arxiv.org/pdf/2306.16803 https://arxiv.org/pdf/1912.02503 https://arxiv.org/pdf/1806.07857	Study and compare credit-assignment methods such as COCOA under delayed and noisy rewards. Reproduce existing results, evaluate modified environments, and identify failure modes of different approaches.	Supervision: Bi-weekly meetings.
IML	Deep Learning	WB	Negative Eigenvalues in Linear RNNs: State Tracking vs. Recall	1	0	https://arxiv.org/abs/2411.12537 https://arxiv.org/abs/2406.06484 https://arxiv.org/abs/2312.04927	Reproduce the state tracking results from Grazzi et al., where DeltaNet is allowed to have negative eigenvalues in its state transition matrices. Then test the same models on associative recall tasks and check whether the better state tracking costs anything in recall.	Supervision: Bi-weekly meetings.
IML	Deep Learning	WB	JEPA World Models (LeWorldModel) on Gridworlds	0	1	https://arxiv.org/abs/2603.19312 https://arxiv.org/abs/2306.13831 https://arxiv.org/abs/2210.13382	Train a small JEPA world model (LeWM) on gridworld environments. The agent only sees part of the world, so replace the Markov predictor with a recurrent one that can remember earlier observations. Then probe the recurrent state for things the agent cannot currently see, for example door and key states, and compare architectures.	Supervision: Bi-weekly meetings.
IML	Deep Learning	EB	Tabular foundation models	1	0	https://arxiv.org/abs/2605.13986 https://research.google/blog/introducing-tabfm-a-zero-shot-foundation-model-for-tabular-data/ https://arxiv.org/abs/2609.04540	Test new tabular foundation models on a set of old kaggle challenges and see where they land out of the box!	
IML	Deep Learning	NR	Depth and Recurrence in Neural Networks	1	0	https://arxiv.org/abs/1512.03385 https://arxiv.org/abs/1604.03640 https://arxiv.org/abs/2102.11011 https://arxiv.org/abs/1603.09382v3 https://arxiv.org/abs/1807.03819	Implement controlled depth-vs-recurrence comparisons, reproduce the ResNet/RNN connection.	Supervision: Bi-weekly meetings (preferably in person). Please send CV + transcript of records when applying
IML	Deep Learning	NR	Latent Reasoning Dynamics in Recursive Neural Networks	1	2	https://arxiv.org/abs/2506.21734 https://arxiv.org/abs/2510.04871 https://arxiv.org/abs/2605.19376 https://arxiv.org/abs/2609.11801 https://arxiv.org/abs/2609.04963v1	Implement a small Looped Reasoning Flow model and reproduce latent trajectory/basin visualizations. Compare reasoning dynamics with baselines and investigate model behavior on multi-solution problems.	Supervision: Bi-weekly meetings (preferably in person). Please send CV + transcript of records when applying
IML	AI 4 Healthcare	LL	king foundation models on medical tim	1	1	https://arxiv.org/pdf/2607.01204 https://www.sciencedirect.com/science/article/pii/S0933365726001259 https://arxiv.org/pdf/2506.07584 https://proceedings.mlr.press/v259/gu25a.html https://arxiv.org/pdf/2410.03794	Time-series foundation models can transfer domains without the need for task-specific data or edensive retraining. However, medical time-series pose challenges beyond standard benchmarks. Here, you should evaluate how well current time-series foundation models transfer to the clinical domain.	Supervision: Bi-weekly meetings If you are interested, please fill out the form: https://forms.gle/4P24c5kgb45685yb9
IML	Drug Discovery	PS	Zero-shot-learning for Molecular Property Prediction	0	1	https://arxiv.org/abs/2303.03363 https://arxiv.org/abs/2403.08167	NLP meets Drug-Discovery: e.g. Generate Molecules from CLAMP-hidden space (trained on assay descriptions); ImageBind related work; Analogies from CLIP that apply to Drug-Discovery; further info: https://github.com/phseidl/jku-ml-seminar	send your cv, motivation, interest to seidl@ml.jku.at reference "seminar-application" - will reply to those considered - thank you for your understanding
IML	ML 4 Healthcare	PS	Seizure detection	0	1	https://arxiv.org/abs/2305.10351; https://arxiv.org/abs/2306.08728	EEG seizure detection / forecasting / type-classification further info: https://github.com/phseidl/jku-ml-seminar	only MT - send your cv, motivation, interest to seidl@ml.jku.at reference "seminar-application" - will reply to those considered - thank you for your understanding
IML	ML 4 Healthcare	PS	Endometriosis Report Retrieval	0	1		Retrieve case-report given an MRI/CT image	send your cv, motivation, interest to seidl@ml.jku.at reference "seminar-application" - will reply to those considered - thank you for your understanding
IML	ML 4 Healthcare	JF	Alzheimer's disease prediction	1	1	[2507.05201] MedGemma Technical Report https://link.springer.com/article/10.1186/s13195-025-01773-z https://ieeexplore.ieee.org/abstract/document/9879971 https://ieeexplore.ieee.org/abstract/document/10377022	Perform Alzheimer's disease stage prediction, conversion prediction or beta amyloid level/positivity prediction using multimodal data such as imaging and genetics.	Supervision: Bi-weekly meetings. If you are interested, please fill out this form: https://forms.gle/i4d9LV7WbFAczYe8
IML	ML 4 Healthcare	JF	Non-Euclidean Representation Learning for Hierarchical Multimodal Data	1	1	https://proceedings.mlr.press/v202/desai23a.html https://ieeexplore.ieee.org/abstract/document/10656738	Learn a shared multimodal space in non-euclidean geometry to capture hierachical structures. Reproduce findings in "MERU" or "Accept the modality gap", evaluate on a medical dataset.	Supervision: Bi-weekly meetings. If you are interested, please fill out this form: https://forms.gle/i4d9LV7WbFAczYe8
IML	AI 4 Healthcare	LL	Synthetic medical time-series	1	1	https://arxiv.org/pdf/2307.10923 https://www.nature.com/articles/s41467-023-41093-0 https://arxiv.org/pdf/2502.20719 https://link.springer.com/article/10.1186/s12911-025-03326-8	Medical time-series data is limited by privacy constraints and high acquisition costs. Your task is to benchmark augmentative and generative methods for medical time-series and evaluate whether synthetic data improves downstream performance.	Supervision: Bi-weekly meetings If you are interested, please fill out the form: https://forms.gle/4P24c5kgb45685yb9
IML	AI 4 Healthcare	EK	Tokenization for longituinalmedical time	0	1	https://arxiv.org/abs/2507.07955 https://arxiv.org/html/2505.14411v3	Learn an adaptive tokenization approach capable of effectively representing medical time-series data independently of the acquisition process (regularly vs. irregularly sampling).	Supervision: Bi-weekly meetings If you are interested, please fill out the form: https://forms.gle/4P24c5kgb45685yb9
IML	AI 4 Healthcare	EK	ffusion Models for Medical Image Segr	0	1	https://arxiv.org/pdf/2609.35553 https://arxiv.org/abs/2107.03006	Discrete diffusion for sampling from discrete distributions typically requires numerous inference steps due to explicit categorical sampling. Following simplex diffusion models, the goal of this topic is to lift the problem onto the probability simplex and thereby improve image segmentation quality while maintaining inference speed.	Supervision: Bi-weekly meetings If you are interested, please fill out the form: https://forms.gle/4P24c5kgb45685yb9
IML	AI4Simulation	PaS	Multi-fidelity airfoil surrogates	0	1	https://arxiv.org/abs/2204.09157 https://arxiv.org/abs/2402.02366 https://arxiv.org/abs/2212.07564 https://web.mit.edu/drela/Public/papers/xfoil_sv.pdf	Set up XFoil (https://web.mit.edu/drela/Public/web/xfoil/) as a source of low fidelity training data for surrogate training and combine with the AirfRANS dataset to train a neural surrogate.	Candidate should have a background in mechanical engineering/ taken a fluid mechanics course or simlar. Please send a CV and a transcript of records with a short motivation for the topic.
IML	Generative Modeling	PL	Diffusion Sampling via Dual Score Matching	1	1	https://arxiv.org/abs/1907.05600 https://arxiv.org/abs/2506.05310	Extend Annealed Langevin Dynamics (ALD) (first paper linked) to auxiliary space and sample there using dual score matching (second paper linked).	please send your cv, transcript of records and short motivation (single paragraph) on why generative modeling interests you to paul.luger@jku.at reference "seminar-application".
IML	AI4Simulation	GeG	Spectral Bias of Gaussian Splats	0	1	https://arxiv.org/abs/2401.03890 https://arxiv.org/abs/1912.01198	Analysis of Gaussian Splat and their spectral bias on different datasets	
IML	AI4Simulation	GeG	Gaussian Splats on PDE datasets	1	0	https://arxiv.org/abs/2509.13938	Compression of PDE data via Gaussian Splats	
IML	AI4Simulation	GeG	Comparing Gaussian Splats to other compression methods	1	0	https://arxiv.org/html/2509.23555v1 https://arxiv.org	Using Gaussian Spalts, Neural Fields, and traditional methods to compress image data and analyse the differences/trade-offs.	
IML	AI4Simulation	PaS	Transfer learning for multi-fidelity neural operatos	1	0	https://arxiv.org/abs/2304.06972 https://arxiv.org/abs/2010.08895	Compare different finetuning techniques for multi-fidelity learning of neural surrogates for PDEs.	Please send a CV and a transcript of records with a short motivation for the topic.
IML	AI 4 Healthcare	LL, JF	AI for Womens Health	1	1	TBD, feel free to suggest papers/topics!	Different Topics possible ranging from Gender/Sex Biases and Fairness to concrete disease progression and prediction modelling like mammography, PCOS, endometriosis	Supervision: Bi-weekly meetings If you are interested, please fill out the form: https://forms.gle/4P24c5kgb45685yb9
IML	AI 4 Quantum	CRG	Neural network quantum states	0	1	https://arxiv.org/abs/1606.02318 https://www.netket.org/	Reproducing Carleo's findings (old but gold) comparing different architectures. Try to use the method to obtain different state's properties, not only energy.	Familiarity with quantum physics is needed, at least the matrix formulation, very popular in quantum computing. Please send a CV and a transcript of records with a short motivation for the topic. Supervision: Bi-weekly meetings.
IML	Deep Learning	RF	Causal vs full Attention	2	2	ttxd, you can suggest a couple of papers	Causal attention is widely used, even for applications where full attention should dominate (Vision, ARC-Challenge). Your task is to pick a specific difference between full and causal attention and try to isolate its effect, for example: training proceedure (autoregressive vs. masked), positional encoding (is rope suitable for full attention?), teacher forcing vs loss per sequence...	I can only supervise students until October 2027
IML	Deep Learning	MaP	Recurrent Reasoning Models for Problems with non-unique ground truths	0	2	https://arxiv.org/pdf/2510.04871 https://arxiv.org/pdf/2603.02193v1 https://arxiv.org/pdf/2502.08696 (unsupervised "baseline" to compare results against)	Recursive reasoning models have recently shown strong performance on constraint satisfaction and combinatorial optimization problems, but standard supervised training can be problematic when a problem admits many equally valid solutions. This project investigates whether supervised recursive reasoners can match solution-free approaches by designing training objectives that account for non-unique ground truths. Possible case studies include graph coloring, where solutions exhibit explicit color-permutation symmetries, and maximum independent set, where multiple structurally different optimal solutions may exist. The project may explore symmetry-aware, multi-solution, constraint-based, or hybrid supervised/unsupervised training objectives.	Send transcript of records and briefly explain you motivation for the topic - plasser@ml.jku.at
IML	Deep Learning	KH	Smart Contract Vulnerability Detection	0	1	AMEVulDetector CEGT	Reproduction and empirical analysis of CEGT for smart-contract vulnerability detection. Implement/reproduce the CEGT pipeline for one vulnerability class, preferably reentrancy. Reproduce the principal baseline and ablation results, and investigate the contribution of the graph-connectivity enhancement, orthogonal transformation, and dynamic attention mechanism.	Students must be familiar with crypto currencies and blockchain technologies.
IML	Deep Learning	KH	Vintage-Consistent Time Series Foundation Model for Real-Time Macroeconomic Forecasting	1	1	https://arxiv.org/abs/2606.28670 https://arxiv.org/pdf/2510.25502	Build a reproducible benchmarking pipeline for macroeconomic forecasting with pre-trained time series foundation models (TSFMs) including MacroCast, TiRex-1, TiRex-2, Chronos-2, and possibly more; fine-tune a pre-trained TSFM or train MacroCast yourself.	send your cv, motivation, interest to k.hauzenberger@ml.jku.at
IML	Deep Learning	KH	Learnable Forecast Reconciliation	0	1	https://proceedings.mlr.press/v235/tsiourvas24b.html; https://www.sciencedirect.com/science/article/pii/S0169207026000312	Reproduce the approach of Tsiourvas et al. (2024) and extend it by jointly learning the ensemble weights and the forecast reconciliation matrix.	
IML	Deep Learning	Alexander Mair	Self-Normalizing NNson the TabArena	1	0	https://arxiv.org/pdf/2506.16791 https://huggingface.co/spaces/TabArena/leaderboard https://arxiv.org/pdf/1706.02515	Develop and optimize a Self-Normalizing Neural Network (SNN) for tabular classification and regression, and systematically evaluate its predictive performance and computational efficiency across 51 benchmark datasets with the goal of adding it to the official TabArena leaderboard.	send transcript of records to a.mair@ml.jku.at
IML	AI in Life Sciences	Alexander Mair	Cancer Modes in WSI Features	1	1	https://arxiv.org/pdf/2308.15474 https://arxiv.org/pdf/2307.12914	Investigate whether PCA-based analysis of precomputed histopathology features can reveal interpretable cancer-associated modes in whole-slide images.	send transcript of records to a.mair@ml.jku.at
IML	Deep Learning	AndreasMayr	looped neural architectures	0	1	https://arxiv.org/abs/1909.01377 https://arxiv.org/abs/2506.21734 https://arxiv.org/abs/2510.04871	the topic is a broad range, details need to be discussed and further defined	please send me a transcript of records in case you are interested in the topic: mayr@ml.jku.at	only for studen	further hard requirements: at least an average degree of 2.0 for the lectures in Deep Learning and Neural Networks and Theoretical Concepts of Machine Learning

IML	Deep Learning	AndreasMayr	flow matching/diffusion architectures	0	1	https://arxiv.org/abs/2210.02747 https://arxiv.org/abs/2303.08797 https://arxiv.org/abs/2209.03003	the topic is a broad range, details need to be discussed and further defined	please send me a transcript of records in case you are interested in the topic: mayr@ml.jku.at	only for studen	further hard requirements: at least an average degree of 2.0 for the lectures in Deep Learning and Neural Networks and Theoretical Concepts of Machine Learning
IML	AI in Life Sciences	AndreasMayr	deep lerarning for drug discovery	1	1	https://www.frontiersin.org/journals/environmental-science/articles/10.3389/fenvs.2015.00080/full https://pubs.rsc.org/sc/article/9/24/5441/621737/Large-scale-comparison-of-machine-learning-methods	the topic is a broad range, details need to be discussed and further defined	please send me a transcript of records in case you are interested in the topic: mayr@ml.jku.at	only for studen	further hard re	further hard requirements for MSc students: at least an average degree of 2.0 for the lectures in Deep Learning and Neural Networks and Theoretical Concepts of Machine Learning
IML	AI4Simulation	MH	earning the Geometry of PDE Solution	1	1	Riemannian Metric Matching for Scalable Geometric Modeling of Distributions Carré du champ flow matching: better quality-generalisation tradeoff in generative models Model reduction of dynamical systems on nonlinear manifolds using deep convolutional autoencoders	Solutions of parametric PDEs lie on low-dimensional manifolds in high-dimensional state spaces. The goal of the project is to apply Riemannian Metric Matching, a novel, scalable denoising-based method for learning local data geometry, to simulated PDE data with known ground-truth geometry, and compares it to k-NN-based estimators.	Solid basic knowledge of differential geometry, iterest in numerical PDE solving. Please send a CV and a transcript of records with a short motivation for the topic.
IML	AI in Life Sciences	AS	ain Adaptation for Microscopy Imaging	0	2	https://pubmed.ncbi.nlm.nih.gov/27560178/ https:/	Compare domain adaptation methods for biological activity prediction in microscopy imaging data	Please send a CV and a transcript of records with a short motivation for the topic to sanchez@ml.jku.at . Supervision: Bi-weekly meetings.
IML	Deep Learning	SH	riving Dataset for Continuous Multi-Tas	0	1	https://arxiv.org/pdf/2206.08367	Investigate the robustness and adaptability of deep learning-based perception models in autonomous driving under changing environmental conditions. Using the SHIFT dataset, the project will evaluate how variations in weather, lighting, and traffic density affect model performance and explore domain adaptation techniques to improve generalization.
